

YLP-Premium Turf Care and Fertilization Program (Revised 2016)

Early spring: February-St. Patrick's Day

Turf areas will receive broadleaf weed control, pre-emergent crab-grass control and balanced fertilizer to promote good growth.

Spring: April-Mother's Day

Turf areas will be fertilized with a balanced fertilizer to maintain color and vigor during the early summer months broadleaf weed control and pre-emergent crabgrass control also to be applied at this time.

Preventive Insect Control: June

Application protects your lawn against damage due to grubs and other various lawn pests.

Summer: June-4th of July

Turf areas will be treated with fertilizer specially formulated to provide nutrients during stressful summer months. Spot weed control also to be applied at this time.

Preventive Insect Control: July

Application protects your lawn against damage due to grubs and other various lawn pests.

Fall: August-Labor Day

Turf areas will be fertilized with balanced fertilizer to encourage rooting. Broadleaf weed control also to be applied at this time.

Liming: October- November

Applications will be performed as needed to correct and amend the soil pH to +/- 6.5, ideal for turf to thrive. As needed and upon client's approval.

Winter: October- Thanksgiving

Turf areas to be fertilized with heavy rated if nitrogen fertilizer, which will help to develop a sturdy root system and promotes early spring color. Broadleaf weed control also to be applied at this time.

Shrub Care: Spring and Fall (Easter & Halloween)

Slow Release landscape and ornamental fertilizer with micronutrients. Twice per year will give your shrubs the nutrients that they need all year long.
